

Utilize your data. Transform your industry.

Our **Food Safety Data Sharing Platform** is a secure, cloud-based program that allows users to analyze their individual company's food safety data and anonymously compare and benchmark food safety performance with aggregated industry data.

Turn your food safety data into actionable intelligence.

▶ **Data Visualization**

Analytical tools help users identify trends, determine risks, and maximize resources.

▶ **Data-informed Decision Making**

With industry-level reporting, users can make data-informed food safety decisions based on key metrics.

▶ **Benchmarking**

Users can anonymously compare their food safety practices with aggregated data from similar growing operations to better assess performance.

▶ **Industry Insight**

Anonymized, aggregated data sets allow for precise, data-driven industry-level responses to regulatory and buyer questions.

▶ **Private, Confidential and Secure**

With the most current and advanced data protection technologies and practices, participants determine who accesses their company's data and own all the decisions surrounding their data.

Join the Food Safety Revolution

This platform is currently available for all leafy greens operations and will open to other fresh produce operations in 2022.

Visit <https://events.wga.com/fsds/> for more information on how we can help revolutionize your food safety practices.
